- The background video is running in the above section.

Second element in the navbar i.e Services:-

Under Services, In dropdown first option Artificial Intelligence.

- Artificial Intelligence: 1st Section

The screenshot shows a dark blue header with the title "Artificial Intelligence & Machine Learning" in white. Below the header is a red progress bar at 100%. To the right is a small graphic of a brain with gears. The main content area has a teal background. It features a sub-section title "Artificial Intelligence – Next generation innovation frontier" and a paragraph about AI's impact on business operations. A red button labeled "Get Started" is visible at the bottom.

- Artificial Intelligence: 2nd Section

The screenshot shows a teal header with tabs for "AI/ML", "AR/VR", "Big Data", "Blockchain", and "Cognitive Computing". Below the header is a large text block about AI adoption in business processes. Further down is another text block about AI consulting services. At the bottom left is a "Machine Learning" heading, and at the bottom right is a blue cloud icon with a brain inside.

- The second section of artificial intelligence is the tab section section. It works as per onclick function.

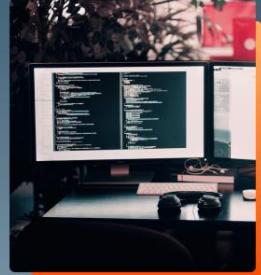

The screenshot shows a teal header with a "Machine Learning" tab. Below the header is a list of five numbered items: 1. Natural Language Processing, 2. Conversational User Experience, 3. Image And Video Analytics, 4. Real-time Stream Analytics, and 5. Technology Audit. To the right of the list is a stylized blue brain icon with circuit board elements.

Our Expertise

Our expertise enables us to transform an idea into reality. We excel at minimum viable product development and allow startups to reach their goals using agile methodologies and technology stacks such as Ruby on Rails, Node JS, HTML5, Android, Swift, AngularJS, and JQuery.

- Product Engineering: 2nd Section

App Development

Our team ensures that you get the best App Development Services for iOS, Android, and web. We focus on quality rather than quantity, and always excel at timely delivery. Our in-depth knowledge and expertise enable us to transform business requirements according to the market conditions.

AGILE DEVELOPMENT METHODOLOGY

We build the next generation of apps by using artificial intelligence. Automation is all upon us, and the best way to automate is to teach machines how to do it. At DigiFutura we have the AI talent that utilizes the artificial intelligence practice to meet your requirement.

- Product Engineering: 2nd Section – Continuation

DETAILED ANALYSIS & DOCUMENTATION

Each project is unique and to truly understand the needs of the client; we do detailed analysis and documentation. With specific time and budget in place, we make sure that we provide the best end-to-end development roadmap before a single line of code is written.

CONTINUOUS DELIVERY

We use continuous integration(CI) to ensure that the client always has access to new changes. It also minimizes risks associated with a release.

CONTINUOUS DELIVERY

IDENTIFY MARKET NEEDS

Markets keep changing, and that's why it is essential to have a strategic and targeted approach to making your product successful. Our market experts not only research the current market but also do additional research relevant to the project and make it a success. We ensure that we cover all the technicalities before getting started.

IDENTIFY KEY ISSUES AND APPROACHES

The end product is a by-product of understanding key issues and approaches to solving them. Our developers and consultants always lookout for key issues and solve them with their expertise. By doing so, we ensure that the customer gets the end product before the deadline and also meet his expectations.

CHANGE MANAGEMENT

Mimimal Viable Product Design

To empower startups and business to try out new ideas, we offer world-class minimum viable product design. By using MVP, companies are testing out how the idea will fair in real-world scenarios. The feedback, in return, can be used to gain project insight, and further, improve the design and make it a grand success in a long run. MVP also solves the issue of fully committing to a project idea and improves the ROI and traction of the idea being implemented.

REDUCE RISK

Risk management is necessary for any project to succeed. MVP enables startups and businesses to take risks by investing less capital on unproven ideas. By going the MVP way, companies can gain insight, reduce risk and take control of the overall expenditure.

➤ Product Engineering: 2nd Section – Continuation

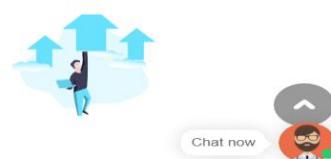

MVP'S FOR INVESTMENT

TMVPs can pave the path for entrepreneurs and give them the tool to convince investors into their idea. MVP is a minimum viable product that showcases the idea in a working condition. It also enables the investor to get hands-on experience and understand its real-world impact by learning through its metrics and analytics. MVP is undoubtedly a straightforward way to promote your business model and validate it in the real world.

MVP SCALE-UP

MVPs are subtle and easy to scale up and be developed into the final platform. Our expertise also ensures that we transform the MVP into a final working product with tight deadlines and strict budget.

Under Services, In dropdown Third option Mobile App Development.

➤ Mobile App Development–1st Section

Mobile App Development

We make mobile apps that your customers love. Be it custom, hybrid or native. Our deep expertise in mobile app development and emerging technologies like blockchain and AI, will help you succeed with your mobile strategy and offer your customers a rich mobile experience.

➤ Mobile App Development–2nd Section

Digifutura provides dedicated Mobile App Development Services for custom mobile app development, mobile-enablement of existing apps, mobile-web applications, and to boost efficiency of native platforms like iOS and Android. We create high performance, feature-packed mobile apps for all major platforms to meet all your business needs.

We have a talent pool of native and cross-platform programming specialists, as well as industry-specific experts with experience in building various types of apps. Our agile app development methodology includes a comprehensive evaluation of your business requirements and mobile strategy to ensure the development of an ideal mobile app that is both cost effective and efficient.

➤ Mobile App Development–3rd Section

We apply only the best tools and frameworks available in the industry along with our stellar app development services, giving you maximum value.

- High quality apps for attracting a larger user base and increasing business impact
- We incorporate scalability and interoperability considerations from the outset, leaving room for technological advancements to augment value of your app
- Extraordinary functionality and features; high quality visual appeal and rich UI/UX
- Cross-platform development – iOS, Android, hybrid.
- Our experienced app developers are constantly upskilled and trained for latest technologies, SDKs, coding patterns etc.
- We take special care to sensitize our mobile app developers to industry-leading security practices
- We apply DevOps and Continuous Integration and Continuous Development for rapid functionality delivery and launch while securing first-class solution quality and performance.

Why Us

PresenterMedia

➤ Mobile App Development—4th Section

Our Mobile App Development Process

• Consulting & Strategy

Our mobile app development experts work with you on your mobile app development strategy and implementation plans, including goal definition, requirement analysis, platform selection, choice of technology, implementation sequence, and more.

• Infrastructure & Architecture

We work closely with you to plan and create suitable architecture and the required infrastructure for your mobile app and its backend if needed.

• Growth Strategy

We help identify and track the metrics that measure the effectiveness of the mobile app and subsequently drive the data insights that identify areas of improvement.

• Design

Our UI/UX work with the developers to give each app a design that is intuitive and functional, yet has the "Wow!" factor. This also involves design prototyping and testing customer experience, and using a UX audit to weed out/enhance weak areas.

➤ Mobile App Development—5th Section

iOS App Development

We develop native iOS apps for the complete suite of mobile devices from Apple, including iPhones, iPads, and Apple Watch. In addition to being experts in the iOS development environment, our programmers have experience building iOS apps that incorporate specific native features, such as Apple Pay and Facetime, as well as frameworks like the iOS SDK, Xcode and Cocoa Controls.

Android

We have experience building commercial and enterprise mobile apps for Android, leveraging the full power of the Android OS and device-specific features. Our app developers know their way around the most recent Android platform and API bundles, as well as Java, C++ and development tools like Android Studio and the Eclipse IDE. We will also help you design, code and deploy to the Google Play Store.

Cross-Platform

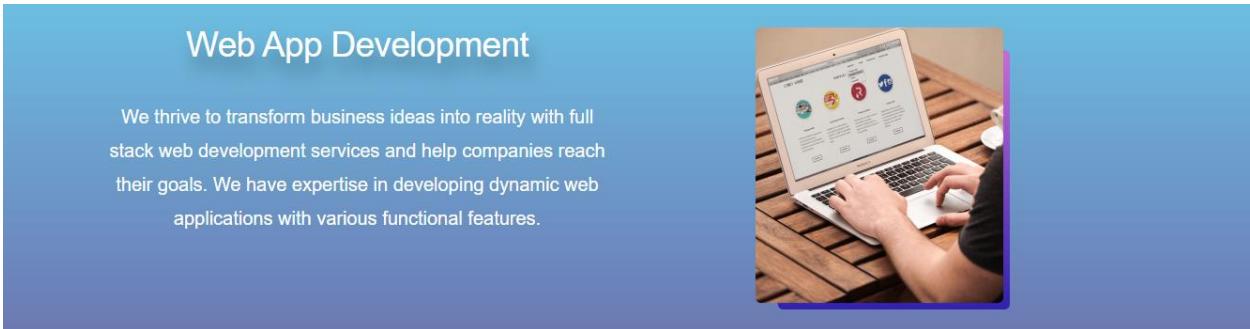

Our focus is primarily on creating a native feel for our cross-platform and hybrid apps. We take special care to lock down a consistent functionality and responsiveness between iOS and Android versions. Our developers are experts in Javascript and HTML5, as well as tools like Xamarin, Telerik, Cordova, React Native, PhoneGap, Flutter.

Under Services, In dropdown Fourth option Web App Development.

➤ Web App Development: 1st Section

The landing page for Web App Development features a blue header with the title "Web App Development". Below the header is a text block stating: "We thrive to transform business ideas into reality with full stack web development services and help companies reach their goals. We have expertise in developing dynamic web applications with various functional features." To the right of the text is a photograph of a person's hands typing on a laptop keyboard, with a smartphone displaying a mobile application interface next to it.

➤ Web App Development: 2nd Section

PROGRESSIVE WEB APPS

Companies are trying to increase engagement and conversations, but they want it to be secure and work just like an app and also can work off-line and low quality internet. DigiFutura extends the mobile-first approach to build PWA and encompass user experience and engagement, using progressive enhancements to provide features similar to native apps when viewed on any device and screen size.

ACCELERATED MOBILE PAGES

Content creators, publishers, consumer platforms and users are looking to improve the mobile content ecosystem as they face the issue of keeping readers on the page while the content is being loaded. DigiFutura is trusted AMP website developer that helps in transferring the whole brand persona, including fonts, layouts and style, to develop elegant AMP sites that can load their content instantly and have designs that lead to conversions and help achieve business goals.

➤ Web App Development: 2nd Section–Continuation

CUSTOM WEB APPLICATION

Businesses need to come up with unique ideas to grow in the competitive market. These unique ideas require custom development, and this is where DigiFutura excels. Our developers are experts in custom web application development.

SACLE AS YOU GROW

Cloud is the future and businesses need to use Cloud technologies to stay in the market. At DigiFutura, we thrive on helping businesses design, build, deploy maintain Cloud applications.

CLOUD APPLICATION DEVELOPMENT SERVICES

We build the best cloud strategy for your business. Our focus is to ensure scalability, reliability, security using the SaaS, PaaS, or IaaS cloud architecture. We have the talent necessary to take over all of the cloud management so that you can utilize your time to grow your business and let us handle the complicated parts.

Under Services, In dropdown Fifth option UI/UX Design.

- UI/UX Design: 1st Section

UI/UX Design

We are a team of passionate designers, developers and strategists who are striving hard to provide best in class User Experience Engineering solutions. we translate business logic to an engaging app experience

- UI/UX Design: 2nd Section

Our Process

DISCOVER

Research

Every requirement is different, and that's why we envisage proper user behavior, understand their perspective before diving deep into the design.

Personas

We build personas that reflect upon the end user and create a design around it rather than using a generic end user.

Site Architecture

We build site architecture with the aim to break information into meaningful chunks and improve site navigation.

Chat now

➤ UI/UX Design: 2nd Section–Continuation

2

DEFINE

Sketching

Sketching enables us to visualize the ideas and improve them before giving them actual form.

Wireframing

Wireframing is where all the fun begins where we transform a skeletal framework of the system and feedback is gathered.

Interaction

The individual elements are then emphasized on to give an intuitive interaction.

➤ UI/UX Design: 2nd Section–Continuation

DESIGN

Style Guide

An arrangement of images, references, colors and fonts with a purpose to evoke an emotion or represent a particular style.

Visual Design

A lot of iterations, combinations and long talks make up the visual experience.

Usability Testing

It is then tested on actual users, iterated, refined and flavored with brilliance.

Legacy Modernisation:

With fast changing technologies and business process evolution, maintaining the IT systems and solutions to current standards becomes a vital business decision to extract the best benefit of latest technologies and computing devices. Legacy technologies and infrastructure are the cause of systems inflexibility, which is compounded by unavailability of skills and increased cost of ownership of such systems.

Legacy Modernization is the continued process of transforming Legacy Systems in order to reduce IT environment complexity and costs, increase data consistency. IT modernization delivers competitive advantages of agile business processes based on new technologies, new architecture and new computing devices. Additionally, it also helps businesses to mitigate risks and reduces the cost of ownership.

- Businesses which adapt legacy modernisation can
- Reengineer business processes and accelerate business operational efficiency.
- Access the full power of modern technologies and architecture.
- Keep in line with current state of IT modernisation and tap in to the modern skill sets.
- Overcome application design limitations and support new business requirements in line with current digital transformation harnessing the power of mobile, social and more.
- Build an easy to adapt, low cost, secure, and scalable solution

Centura Technologies, with over a decade of IT expertise in deep domain and technology modernization, helps organizations transform their legacy systems into modern, efficient, and responsive customer centric systems. Our legacy modernization services focus on improving the longevity, usability, functionality and accessibility of current systems.

➤ Staff Augmentation: 8th Section- Continuation

We bring to our customers technology-neutral and vendor-neutral solutions that best fit to their business requirements and achieve the maximum benefit of modernization of their legacy systems by implementing new systems, and deploy modern IT infrastructure that can deliver high performance, agility, and profitability.

With Centura Technologies, the customer can plan their legacy modernisation on:

- Application Modernisation as desktop application, rich application and Web modernisation
- Development of Mobile Applications, Hybrid mobile applications
- Development of Cloud Applications as PaaS and SaaS
- Enterprise Architecture Modernisation
- Open source application development and migration

Why Centura Technologies for IT outsourcing?

The future of drones in agriculture looks promising: by 2026, [analysts claim](#) that the market for agriculture drones is set to reach \$6.52 billion, expanding at 31.4 percent CAGR. The demand continues to grow as the costs of drones decrease and drone software in agriculture gets increasingly sophisticated.

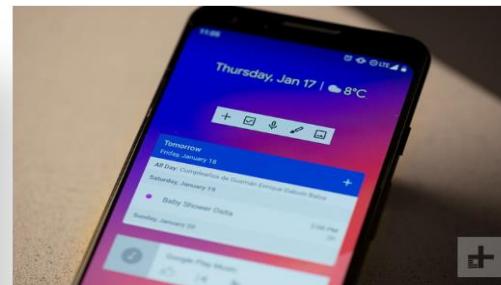

➤ Blog:3rd Section

Android vs. iOS: Which smartphone platform is the best?

Truthfully, numbers aren't the best metric because most of us

➤ Blog:3rd Section-Continuation

Truthfully, numbers aren't the best metric because most of us only use a handful of apps and the most popular ones are available on both platforms. Traditionally, iOS has been a more lucrative platform for developers, so there has been a tendency for new apps to appear there first, but that is changing as Android's market share continues to grow. In the U.S., iOS still leads the way, but developers elsewhere are increasingly targeting Android first.

- Blog:4th Section

Current trends in .NET web development?

The biggest change is the open sourcing of .NET Core (along with a whole host of other related projects) which is a cross-platform implementation of .NET. The next major version of ASP.NET will be based on .NET Core and will give you the ability to run your applications on Windows, Linux and Mac.
